

UC San Diego

Apace's turnkey storage solution addressed the needs of the marketing department of the University of California San Diego

Background

The marketing department of University of California San Diego (UCSD) was looking for a reliable and robust nearline shared storage to replace their existing, old shared storage. They were looking for a shared storage system that was easy to use and can integrate seamlessly into their existing network infrastructure with minimal training for the users.

“I was amazed at how quickly Apace was able to integrate their system to our network infrastructure. In a matter of hours, our editors were using the eStor. Usually other vendors take days or weeks to install their products.”

**- Michael Sterner,
Post-Production Manager**

Why Apace?

After going over their due diligence process, the marketing department of UCSD decided on the eStor, the nearline shared storage product from Apace. The following reasons impacted their decision-making process:

- A solution that works out of the box and offers what was needed without customization
- A simple storage solution that integrated seamlessly with the customer's existing network infrastructure
- Easy to use that didn't require the training of users
- Helpful and responsive technical support team

Apace

The Solution – Apace’s eStor

“I like having the option to later add additional solutions such as their MAM or archive solutions on our existing or additional shared storage as our department grows in the future.”

- **Michael Sterner,**
Post Production Manager

Apace’s eStor was the perfect solution for the marketing department for UCSD. It was simple to manage and easy to use. The eStor was installed in a matter of hours and the editors were using immediately after it was commissioned. “I was amazed at how quickly Apace was able to integrate their system to our network infrastructure. In a matter of hours, our editors were using the eStor. Usually other vendors take days or weeks to install their products,” said Michael Sterner, Post-Production Manager. He added, “I like having the option to later add additional solutions such as their MAM or archive solutions on our existing or additional shared storage as our department grows in the future.”
